No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A_Geneseq_101002:*

                                                         AAR83061-R83085, AAR83090-R83080 and AAR83001-Reprehent fragments of clases I major thistocompatibility complex (WHC) antigens. These equances can be used to extend the pariod of acceptance by a recipient of a transplant from an WHC unmarched door. The peptides are administered for a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for ourset restments). The peptides patient the current carrier of the patient for a limited activity of the cyclocate I lymphocytes (CTLs) of the patient.

This invention relates to a new human antibody specific for human interlaukinal to the live file. The invention also includes entigen binding portions that bind to IL-12. Requences AR33948-893516 represent human continuous that bind to IL-12. Sequences AR33948-893516 represent human card sequences of the variable respin amino acid sequences are minimal acid sequences. The respect and aria sequences. The variable respin amino acid sequences are given in AA83551-83560 and AA84066-84049. Sequences AA83551-840663 represent anti-IL-12 CMB1 related amino acid sequences are given in AA84064-84067. Primers used in the identification and construction of the antibodies of the invention is a nettralising antibody and has antithematic; antistriction is a nettralising antibody and has antithematic; antistriction are action. The antibodies of the invention is an extralisting antibodies of antistriction are discontinuous entities. The invention are given in the article antibodies of the invention are useful in the treatment of antibodies or antigenthal article antistriction are associated with derinimanal are useful in the treatment of associated and disease. The antibodies of a pharmaceutical composition composition in the mann II-12 classed of human II-12 disorders.
                                                                                                                                                                                  Human, neutralising antibody, interleukin-12; IL-12; antiinflammatory; complementarity determining region. Cont, antihementic, antiarthitic, antiatectoric, neuroprotective, antipsoriatic, antiatementic, antiatementic, antiatementic, antiatementic, antiminionally immunosupersentive; Crohn's disease; mailtipse sciencesis; rhoumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's

                                                              AAB40057;
AAB40057
```

The sequences given in AAR30472-73 represent fragments of intercellular adhesion molecule-3 (ICAM-3). Comparisons of these sequences with two mequences from ICAM-1 and ICAM-2 reveals a high degree of homology between NR-17 and sequences alown in the first IG domain of ICAM-2. NR-10 peptide shows weak homology to sequences within domain

ICAM-2. NK

for ICAM-1. These peptide sequences were used to design probes for the isolation of the CDNA encoding ICAM-3 fee also AAA33110-11). CDM-3 is involved in the process by which populations of laukocytes recognise and adhere to callular substrates. ICAM-3 modiates callular interactions with other lymphocytes, macrophages and neutrophils at the site of inflammation and sites of immine responses.

AMPRISTOR 2 are mouse ANM protein epitoges used to generate polyclonal antihoddes. Antibodies rated against the ANM protein detected a monor-pecifically a High molecular weight of the appected size of 150 km one western lottes of protein lysates darived from fibroblast and lympho- blastoid cell lines. Because of the high frequency of truncation breathing the ANM protein and beta fire truncation breathing the ANM protein and beta fiderified if such proteins in the ANM protein and beta fiderified if such proteins are tabla. Musticossaive genetic and beta fiderified if such that a progressive genetic and proteins and a progressive genetic and a fiderified in the ANM protein are tablated and immune sections. The ANM protein and a progressive genetic and a manufacture of the ANM protein and a highly conserved of crammin region should high product (ANM) 655) has a highly conserved of crammin region should high respect to the catalytic construction properties.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  kinases A.T mutations affect a variety of tissues and jeed to cancer predignostion. Indentification of A-T carriers by analysis at nucleic acid or protein levels. Allows better supervision and treadment of subjects who are increased risk of developing center and are particularly sensitive to radiation. The transgenic animals and transformed cells are useful as models of the human disease. Also viral vectors expressing the XFM procein can be used in gene therspy of A-T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New gene ATM implicated in ataxia-telangiectasia and related protein - useful in screening methods, partic. for identifying disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (UYRA-) UNIV RAMOT APPLIED RES & IND DEV LTD.

                                  M-ras, interleukin-9 signaling pathway; pathogenesis; atopic allergy; asthma: leukemia. Lymphoma; Hodgkin's disease; amycosis fungoide.
                                                                                                                                                                                                                                                                                                                                                                                   protein which was used to raise antibodies. W-Ras, a part of the interleukin-9 signaling pehway, is involved in pathogenesis of atopic allorgy, sethma and similar conditions, some leukemias and limphomas and tumors. Agents that downregulate W-Ras are used to treat these conditions, particularly T-cell lymphoma or leukemia; Hodgkin's disease and mycosis fungoides. Westarring levels of M-Ras is used to dispose, or monitor, these conditions (an elevated level being indicative of disease).
                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a peptide derived from M-ras
                                                                                                                                                                                                                                                                Louahed J, Nicolaides N, Renauld J;

And Worksels, at an entitle date. Antibodies raised against the ATM protein and monoclonal antibodies. Antibodies raised against the ATM protein detected mono-specifically a high molecular weight of the expected size of 350 kbs on Western blots of protein lyastes derived from fibrobiast confidence blastod earl lines because of the high froquency of truncation mutations in the ATM gene, mutated ATM protein can be carried if such proteins are stable. Mutated ATM protein can be carried if such proteins are stable. Mutated ATM protein can be atxis—telangictasia (A-T), a progressive genetic disorder affecting the central narvous and immune systems. The ATM gene, located at case atxis—telangictasia (A-T), a progressive genetic disorder affecting the central inks but damage surveillance to call cycle control. The ATM system that links but damage surveillance to call cycle control. The ATM content content inks but an adverse central randout affect a variety of tissues and lead to cancer predisposition. Indentification of A-T carriers, by analysis at nucleic control newels, allows better supervision and treatment of such subjects who are at increased risk of developing cancer and are controlled to particularly sensitive to radiation. The transgenic animals and the variety of transformed calls are useful as models of the human disease. Also viral received the ATM protein can be used in gene therapy of A-T.

Cis-element; ligand; highly specific DNA binding domain; HSDB; human; H3-kappa-B; regulatory domain; murine; homologue; LL-6; interleukin; HLA class I gene; HLA-B27; HLA-A; acute phase protein response; syngane; immune response; LL-6; LL-6; diagnosis; gene therapy;
                                                                                                                                                                                                                                                                     New chimaeric peptide(s) including a conformational epitope -
inserted into a peptide having similar native conformation, useful
in vaccines and for determn. of minimal epitope(s) or for mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce openic artibodies (AD), and in vaccines against C. elegans. AD raised against the Can be used for immunoherapy and diagnosis, while the CP can be used diagnostically to detect Ab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present peptide is a chimaentic peptide (PP, contg. a coll contg. a conformation to the conformation of the conformation, enabling the epitope to be presented in an immunologically active conformation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for the screening, diagnosis or correcting to breast cancer (BC), determining the steap or severity of BC, and monitoring the effect of therapy administered to a subject having BC, comprising analysing a sample of body fluid by two diamestical bc, electrophoresis to generate a two-dimensional array of features, comprising a chosen feature whose abundance correlates with BC or predicts the onset or course of BC. The method (I) involves:

Ca analysing a sample of body fluid from the subject by two-dimensional electrophoresis to generate a two-dimensional array of features, correlates a chosen feature whose relative abundance of sach closen feature in the sample with the abundance of that chosen feature correlates the correlates with BC or predicts the onset of BC and (b) comparing the abundance of each chosen feature in the sample with the abundance of that chosen feature in the sample with the abundance of that chosen feature (BRP) in the test sample. The method is useful for screening, diagnosis or CC prognosis of breast cancer, determining the tage or severity of BC, complete the sample of therapy administered to a subject having BC cc and for identifying a subject a triak of developing at CA MBR310, represents breast cancer associated protein isoform (BRP) cc Pheny and Correct and Corre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                  Screening, diagnosis or prognosis of breast cancer, by analyzing a sample of serum or plasma by two dimensional electrophoresis to detect the presence or level of a breast cancer-associated feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinoms and cancers. AM37196 to AM437204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ANY93155-Y93159). The receptor variants reduce proliferation, motility and invasiveness of cancer calls. They can therefore be used to treat or prevent cancer, specifically of the breast or ovary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytostatic; mutant; mutein; osetrogen receptor-alpha; zinc finger; osetrogen receptor-beta; vitanin D receptor; retinic acid receptor; rethings domenon receptor; proliferation; motility; invasiveness cancer; hilytoid hormone receptor; proliferation; motility; invasiveness cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a pharmaceutical composition containing at compare a nuclear said estate to the transcript of the receptor is C region (containing the first incomparison but which lacks the ability to bind osetrogen and/or AP-2 (c finger) but which lacks the ability to bind osetrogen and/or AP-2 (c finger) but which lacks the ability for a spho osetrogen receptor expended and and appropriate the ability of the ability of the ability of a spho osetrogen receptor. Similar variations may be generated in the homologous of other osetrogen-type receptor and a said receptor of thyroid formions receptor (see peptides).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition containing nucleic acid encoding variant estrogen receptor reduces proliferation, motility and invasiveness of cancer cells,
                                                                                                        present invention.

N. B. Pages 66 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                            Length 36;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB 21; Length 37;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer-associated mucleic acid molecules (N) and proteins and proteins reconcernated mucleic acid molecules (N) and proteins are collectively known as colon cancer antigens. The colon cancer antigens are collectively known as colon cancer antigens. The colon factor and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate perpression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P Additionally, N may be used to produce the colon cancer-associated Pe, Additionally, N and P by used to produce the colon cancer-associated Pe,
                                                                                                                                                                                                  The sequences given in AAR91378-414 represent peptides that bind to highly specific DRN binding domains (1858)s. * These sequences were record for binding to the H2-kappa-B oligomucleotide which contains the NR-kappa-B binding site, and comprises the sequence given in AAT1359. These peptides may be used in a composition for diagnosis and AAT1359. These peptides may be used that a composition for diagnosis and pene therapy and for modifying the transcription or activity of a gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -

Claim 11; SEQ ID NO 15450; 3071pp + Sequence Listing; English.

AMK54951 to AAX64702 encode the human immune/haematopoietic antigen (I) and explose admin acid a dequences given in AAM81301 to AAX6491921. (I) have optostatic activity, and can be used in gene therapy and vaccine production. (I) have optostatic activity, and can be used in the prevention, disponsis and treatment of disposes associated with inappropriate (I) expression and treatment of disposes associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mitations or delutions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polymuclecides may be used to produce the secreted (I), by inserting the nuclear acids into a host cell and culturing the cell to express the protein. (I) proteins and polymuclecides may be used to produce the secreted (I), by inserting the nuclear edids into a host cell and culturing the cell to express the protein. (I) protein and polymuclecides may be used to produce to addition and cancer manners homeopotetic-relatived cells. AAX64703 cancers and cancer manners have acid by AAX6492 to AAX64950 and AAX64703 concerns from the present invention. AAX64952 to AAX64950 and AAX64700.
